Mission

Child Advocates of Montgomery County empowers vulnerable children through volunteer advocacy and strengthens their family and community with education, so they can flourish in a safe, nurturing environment.

Vision

Our vision is a connected community where children and families thrive... And together, we work to eliminate childhood trauma, abuse, and neglect.

President's Message

As I reflect on the past year, I am filled with pride, gratitude, and above all, hope.

The children and families we serve face increasingly complex challenges. Children entering foster care today have often endured more severe abuse for longer periods before removal, arriving with deeper trauma. More families are struggling with food insecurity, housing instability, and the weight of generational trauma. And more children than ever are entering our juvenile justice and truancy systems—each one in need of a safe, stable adult to help them navigate difficult circumstances. These realities make our work more urgent than at any time in our history.

Yet hope continues to rise—because of you.

In June 2026, Child Advocates of Montgomery County celebrated eleven consecutive years of ensuring that every child involved in the child welfare system in our county has had the support of a dedicated volunteer Advocate. This milestone belongs to our entire community.

Now in the third year of full operation, our Justice-Involved Youth Advocacy Program and Educational Advocacy Program are expanding rapidly to meet critical and growing needs. Sustaining this growth requires diverse funding, and we are actively pursuing grants, foundation partnerships, corporate support, and individual donations. With reductions in federal funding making the landscape more competitive than ever, we would welcome any connections to individuals or foundations that share our commitment to children.

Our Community Education Division continues to extend our reach well beyond county lines. Last year, our team trained more than 6,000 individuals in Trust-Based Relational Intervention® (TBRI®)—including 36 human services agencies, nearly 1,400 teachers across 13 Montgomery County schools, and professionals in 3 states. The ripple effect is significant: tens of thousands of children now have educators equipped with trauma-informed tools that promote healing, connection, and resilience.

Financial responsibility remains a cornerstone of our work. Our continued stability ensures we can respond to growing needs while expanding services thoughtfully and sustainably.

None of this is possible without you. Your generosity—through donations, volunteer service, board leadership, or simply sharing our mission—is what makes hope real for children who have endured the unimaginable.

As we look ahead, I invite you to join us. The need has never been greater, and together we are building a future where every child in Montgomery County is seen, supported, and given the chance to thrive—one child and one family at a time.

With gratitude,

A handwritten signature in black ink that reads "Ann Marie Ronsman".

Ann Marie Ronsman, MSN, RN, TBRI® Practitioner
President & CEO

Every child deserves the key.

Part One: The Goal

Every child in Montgomery County deserves safety, stability, and a future they can open.

Behind every case file is a child or young person at a critical juncture.

- Some have been removed from their homes for their own protection.
- Others have been adjudicated for an offense and are working through what comes next under court supervision.
- Still others sit in classrooms unable to engage because the conditions at home have followed them inside.

Our goal is not abstract. It is for each of these children to be heard, to be known, and to be guided by adults who refuse to let them disappear inside a system. The challenges are large. Our response is specific.

**But challenges
block the way
for some.**

Part Two: The Challenge

But safety, stability, and a brighter future are not the reality for every child. What the research shows, what the data confirms, and what Montgomery County children are living.

The children we serve face compounding adversity across child welfare, juvenile justice, and education. Science, data, and daily case reality tell the same story: the children who need the most support are navigating the most fragmented systems.

Deeper trauma. More complexity. A system in transition.

Before we describe what we do, here is what we are responding to.

The Science of Childhood Adversity

Before there is a case file, there is a child in crisis. Before a child enters a system, something has happened in their life that has made involvement in the system necessary.

The research on Adverse Childhood Experiences — known as ACEs — has, over the last quarter century, become the foundation of how trauma-informed organizations understand the children they serve.

What ACEs Are

Adverse Childhood Experiences are potentially traumatic events that occur in childhood. They fall into three broad categories:

ABUSE

- Emotional abuse
- Physical abuse
- Sexual abuse

HOUSEHOLD CHALLENGES

- Domestic violence
- Substance abuse
- Mental illness
- Parental separation or divorce
- Incarcerated parent

NEGLECT

- Emotional neglect
- Physical neglect

How Common ACEs Are

~64%

of U.S. adults report at least one ACE

~17%

report four or more ACEs

8 of 10

leading causes of death linked to ACEs

Why ACEs Matter

Children who experience multiple ACEs are at significantly greater risk for a wide range of adverse outcomes throughout life. Compared to peers with no ACEs, adults with four or more ACEs are at substantially elevated risk for:

- Depression, anxiety, and suicide attempts
- Substance use disorders, including alcohol and intravenous drug use

- Chronic physical conditions including heart disease, lung disease, diabetes, and certain cancers

- Lower educational attainment and employment outcomes
- Earlier involvement with the criminal justice system

The children we serve carry these experiences into every foster home, every courtroom, and every ordinary school day. Understanding ACEs is not optional context. It is the starting point of any honest accounting of what our children need.

Challenges in Child Welfare

Texas's child-serving systems are in a period of significant transition.

Community-Based Care (CBC) is Texas's shift from a state-managed foster care system to locally led nonprofit organizations. Legislative changes in 2021 and 2023 have also resulted in fewer children entering foster care. Here's how Child Advocates of Montgomery County is seeing the results of these changes.

1 Cases are more severe than ever.

Even though fewer children are entering foster care, those who do face deeper trauma, greater mental health needs, and fewer placement options.

2 A strained system means more gaps.

Child welfare services now differ by region, and CASA has quickly adapted. Volunteers must remain agile and exhaust more resources in an increasingly complex system.

7 in 10 children in foster care in Texas are moved out of their home county.

They are moved away from their homes, relatives, schools, and everything they know. CASA volunteers across Texas continue to show up, traveling over a MILLION miles annually for the children they serve.

~368,000	27,343	277
Children in Foster Care in the U.S.	Texas Children in Foster Care in 2025	Montgomery County Children in Foster Care in 2025

Steady. Present. Essential.

As referenced in our President & CEO's letter, the children entering care today have often endured more severe abuse for longer periods before removal. These cases require deeper coordination across child welfare, behavioral health, education, juvenile justice, and the courts, as well as stronger, more consistent advocacy at the child level.

As Texas continues the rollout of Community-Based Care (CBC) — a transition that shifts case management and service delivery from the state to regional Single Source Continuum Contractors — the system is experiencing more complexity and pressure at every level. New providers, new processes, and new accountability structures all require time to mature.

For Child Advocates of Montgomery County, this means one thing: a consistent, trusted adult voice for the child is not a supplement to the process. It is essential to it.

Challenges in Juvenile Justice

Youth who enter the juvenile justice system are disproportionately likely to have experienced trauma, abuse, neglect, or prior involvement with child welfare.

The juvenile justice system sits at a critical crossroads. It receives some of our community's most vulnerable young people, yet without the right interventions, it can become a revolving door rather than a pathway to stability.

1 Recidivism rates are alarmingly high.

The Office of Juvenile Justice and Delinquency Prevention estimates that between 50% and 75% of adolescents involved in the juvenile justice system reoffend within three years. Without intervention, the majority of youth who enter the system will return to it.

2 The long-term cost is borne by everyone.

Decades of research from the Casey Family Programs, the Annie E. Casey Foundation, and the National Council on Crime and Delinquency document that youth involved in the juvenile justice system face elevated risk of school failure, unemployment, homelessness, substance use, and adult incarceration.

50%-75%

Re-arrest rates of youth within 3 years after confinement within a juvenile justice facility

90%

of juvenile offenders in the United States report at least 1 ACE

70%

of youth arrested in the U.S. each year have a mental health condition

52%

In a study of youth involved in the juvenile justice system, percentage who reported at least 4 ACEs

50%

of youth in the juvenile justice system have a history of involvement with child welfare services

Intervention Changes Everything

The data tells a sobering story: the majority of youth who enter the system carry significant trauma histories and unmet mental health needs, and without meaningful intervention, most will reoffend. The consequences extend far beyond the courtroom, affecting educational attainment, economic opportunity, housing stability, and long-term public safety.

For Child Advocates of Montgomery County, this is not an abstract policy challenge. These are children we know, families we serve, and outcomes we are positioned to help change.

Challenges in Education

When a child stops showing up for school, it is rarely about school alone. And the longer it continues, the harder the path back becomes.

Across Montgomery County, a growing number of students are at risk of, or already classified as, truant or chronically absent. Many have experienced trauma, instability, or difficult home circumstances. Behind nearly every absence is a child who is struggling to keep up and a family that feels overwhelmed and unsure where to turn.

1 Attendance is an early warning sign.

Chronic absenteeism is one of the strongest early predictors of falling behind, dropping out, and later system involvement. By the time a student is labeled truant, the warning signs have often gone unaddressed for years.

2 Families are left to navigate alone.

Truancy is often treated as a discipline problem, but its roots usually run deeper: unmet mental-health needs, transportation, housing instability, or trauma. Without help identifying the right support, children and families fall through the cracks.

18.7%

of students in Montgomery County school districts were chronically absent in 2022-23, up 75.7% from 2018-19 (10.7% chronically absent)

10%

Missing just 10% of the school year — about two days a month — is enough to be classified as chronically absent

\$819

Estimated cost to a district for each chronically absent student per year

2X

Children with prior child welfare involvement are twice as likely to be suspended or expelled from school

Without Intervention, the Cost Compounds

For a child who is chronically absent, the consequences accumulate quickly — lower reading proficiency, grade retention, and a sharply elevated risk of dropping out, disconnection, and later system involvement. Each missed day makes the next one easier to miss, and for families already stretched thin, the path back can feel impossible to navigate alone.

Child Advocates of Montgomery County is ready to help.

We help turn the key.

Part Three: Child Advocates at Work

Fortunately, if the science of adversity explains what wounds a child, the science of hope reveals what helps them heal.

Hope is not wishful thinking. It is a measurable, teachable predictor of resilience, and it grows in the presence of one thing above all: a stable, caring adult who refuses to give up.

That is the work of Child Advocates of Montgomery County across child welfare advocacy, justice-involved youth advocacy, educational advocacy, and trauma-informed community training. One child at a time.

Heard. Known. Guided. Never alone.

Here is how we respond.

The Science of Hope

Hope is the key. It is a measurable buffer against trauma.

What Hope Really Is

Hope is not wishful thinking. Decades of psychological research define hope as a cognitive process: the belief that the future can be better than the present, combined with the will and the strategies to make it so.

Synthesizing more than 2,000 published studies, **researchers have identified hope as the single best predictor of well-being**, a stronger predictor than IQ or natural talent.

Most importantly, hope is malleable. It can be measured, taught, learned, and strengthened at any age, after any adversity.

The Three Measurable Components of Hope

GOALS

The ability to envision a clear, meaningful future

PATHWAYS

The ability to map multiple routes (and flexibility to find new ones when obstacles arise)

AGENCY

The willpower and self-belief to take action and persist through setbacks

GOALS + PATHWAYS + AGENCY = **HOPE**

Why Hope Is a Practical Tool, Not Just a Feeling

HOPE IS MEASURABLE

Validated tools reliably quantify a person's hope, making progress trackable over time

HOPE CAN BE TAUGHT

Hope-centered programs teach children and adults to set goals, map pathways, and build agency

HOPE CAN BE STRENGTHENED

Hope spreads through safe, consistent relationships with caring adults, making it something a community can intentionally cultivate

How Hope Buffers Against Trauma & ACEs

2,000+ peer-reviewed published studies establish hope as the single best predictor of well-being

Hope mitigates the impact of ACEs — children with higher hope demonstrate greater resilience after adversity

Higher hope predicts better academic achievement, graduation rates, and life satisfaction

Higher hope is linked to lower depression, anxiety, and PTSD symptoms among childhood trauma survivors

Hope as a Framework for Healing

Adverse Childhood Experiences (ACEs) disrupt a child's ability to hope. With the right intervention, hope can be restored, and it becomes the engine that drives resilience and more positive, long-term outcomes.

From Adversity to Outcomes: The Pathway Hope Creates

How Trust-Based Relational Intervention® Builds Hope

Trust-Based Relational Intervention (TBRI®) is a trauma-informed, attachment-based model from the Karyn Purvis Institute of Child Development at Texas Christian University. Its three principles map directly onto the components of hope.

CONNECTING

Builds the relationship that carries hope.

Mindfulness and engagement strategies create the trust through which hope can be established.

EMPOWERING

Builds pathways & agency.

Ecological and physiological strategies give children the felt safety and skills to pursue goals.

CORRECTING

Protects goals through setbacks.

Proactive and responsive strategies teach children to persist and re-route rather than give up.

Protective Factors That Strengthen Hope and Mitigate ACEs

Safe, stable, nurturing relationships

A clear sense of belonging

Goal-setting & problem-solving skills

Consistent mentors & advocates

How Child Advocates of Montgomery County Uses the Science of Hope

Volunteer Advocates use the Hope Score tool to measure a child or family's level of hope and identify concrete steps to grow it. But measuring hope is only half the work; building it takes a trusted relationship. That is where Trust-Based Relational Intervention (TBRI®), the trauma-informed model our Advocates are trained to practice and our staff is trained to coach, comes in:

- **Connecting** — establishing the trust that hope depends on
- **Empowering** — helping children set and pursue meaningful goals
- **Correcting** — guiding them to persist through setbacks

Hope science shows us what to measure; TBRI® shows us how to nurture it.

2025 Impact: Child Advocacy

100% of the children served by volunteer Advocates are children and youth from “hard places.” Advocates provide valuable information and assistance to help ensure a child’s best interests are met. Advocates stay by a child’s side and remain a consistent presence throughout each case.

Volunteer Advocacy Programs

CHILD WELFARE ADVOCACY:

Court Appointed Special Advocates® (CASA) supporting children in foster care whose families are involved in the child welfare system

JUSTICE-INVOLVED YOUTH ADVOCACY:

Court Appointed Special Advocates® (CASA) supporting youth involved in the juvenile justice system

EDUCATIONAL ADVOCACY (Truancy Prevention):

Volunteer Advocates supporting youth struggling with school attendance or participation

34

Number of years Child Advocates has been serving Montgomery County children and families

Volunteer Advocates

149,393

Miles Driven in Service to Children

12,668

Volunteer Hours Served

398

Children’s Lives Changed

Children Served by Advocacy Program (all programs)

Children Served by Age Group (all programs)

Child Welfare Advocacy

Goal: Every child in foster care in Montgomery County has a court-appointed Advocate at their side.

1 With cases more severe than ever, a dedicated Court Appointed Special Advocate is essential for every abused or neglected child.

Children entering foster care today face deeper trauma and more complex challenges than ever before. Highly trained CASA volunteers provide the steady, individualized attention required to guide these vulnerable children through difficult cases.

2 Advocates ensure children don't fall through the cracks of an increasingly complex system.

Frequent caseworker turnover and shifting system processes may cause critical details about a child's care to get lost. Advocates serve as the one permanent constant, keeping families, teachers, medical professionals, and therapists connected so no child is overlooked.

Children Served by Age Group

Children Served by Gender

Placement of Child at Close of Case

Supporting Families, Maintaining Connections

Outcomes at close of case (101 cases): **Nearly two-thirds of children – 64% – left care connected to family**, whether reunified with a birth parent (32%), placed in the custody of a relative (23%), or adopted by a relative (10%). An additional 30% found permanency through adoption by a non-relative family.

Justice-Involved Youth Advocacy

Goal: Every adjudicated youth has a consistent adult walking beside them through rehabilitation.

1 Justice-involved youth assigned a CASA volunteer are HALF as likely to experience a subsequent arrest.

A 2025 study (Ryan) proved that only 23.7% of youth with a CASA volunteer were rearrested within 18 months, compared to 46.3% of those without one. Consistent volunteer advocacy measurably alters a young person's trajectory and keeps them out of the justice system.

2 CASA volunteers support justice-involved youth, delivering better outcomes for kids and long-term cost savings for the community.

While state and county youth detention costs hundreds of dollars per day, CASA advocacy costs just \$10 to \$15 daily. In Montgomery County, this program cut state commitment rates in half, saving taxpayers an estimated \$1.36 million while putting youth on a better path.

2.5X

Felony youth served by Child Advocates of Montgomery County are 2.5 times LESS LIKELY to be committed to TJJD than those without CASA advocacy.

Youth Served by Age Group

Youth Served by Gender

Outcomes at Close of Case

Intervention in Action

*Outcomes at close of case (24 cases): **Nearly 4 in 5 cases — 79% — closed with a positive outcome**, whether probation successfully completed (67%) or charges dismissed (12.5%). In 12.5% of cases the youth was referred to the Texas Juvenile Justice Department, and 8% were transferred to another jurisdiction.*

The need outpaces our current reach. In 2025, more than half of the 191 youth on probation in Montgomery County navigated the justice system without a CASA Advocate. We remain committed to growing this program, so more local youth receive the life-changing support resulting in better long-term outcomes.

Educational Advocacy

Goal: Every child struggling to stay in school has an Advocate who helps keep them there.

1

Student Success Advocates work to fight chronic absenteeism in our area schools.

Chronic absenteeism costs Montgomery County school districts an estimated \$14.84 million in lost attendance-based funding each year. Advocates intervene at the first warning signs to reverse these absences, keeping children in the classroom and vital funding in our schools.

2

Advocates work with the child and family to provide support and connect them to resources.

Behind most attendance struggles are hidden barriers like housing instability, transportation issues, or health needs. Advocates partner directly with families and schools to bridge communication gaps and connect parents to the community resources that solve the root problem.

Children Served by Age Group

78% of children served were elementary-aged, the highest-impact window for intervention, when attendance habits and early literacy set the trajectory for everything that follows.

Children Served by Gender

Program Outcomes

50

New referrals received during program year

167 days

Median case duration: Roughly 5.5 months sustained advocacy per child

7

School districts served across Montgomery County

What Parents Tell Us

In our October 2025 Educational Advocacy Parent Satisfaction Survey:

- **83%** of respondents felt that **their student(s) had benefited** from participating in the program.
- **67%** agreed they've **noticed a positive change** in their student(s)' willingness to participate in school.

Early Results, and Early Lessons

Heading into the new school year, the Educational Advocacy Program combats chronic absenteeism by tackling the root issues that keep students from the classroom. By providing trauma-informed support and connecting families to vital resources, we give vulnerable students the stability they need to stay in school and succeed.

2025 Impact: Prevention Services

Child Advocates of Montgomery County's Training & TBRI® Community Education Division focuses on prevention, providing training, coaching, and resources to the people who surround vulnerable children every day: parents, caregivers, schools, government agencies, businesses, and nonprofit organizations. Both community training and individualized coaching cover crucial topics, including Understanding Children from Hard Places, Trust-Based Relational Intervention® (TBRI®), and a specialized curriculum on child trafficking and exploitation prevention. Together, these programs equip community members with the knowledge and tools they need to recognize, understand, and support children who have experienced trauma, reaching children not one case at a time, but one trained adult at a time.

In FY 2025, that reach extended well beyond Montgomery County. The Division held 259 trainings reaching 6,097 people, completed the first-ever Texas CASA TBRI® Cohort, presented at the Texas Child Care Administrators Conference, and carried TBRI® training as far as El Paso, Texas; Kalispell, Montana; and Sumter, Georgia.

Trainings Held

Individuals Trained

A Milestone Year

The Division completed the first Texas CASA TBRI® Cohort, launched TBRI® classes at the Juvenile Detention Center, began supporting the DA/Safe Harbor "Coping for Court" program, trained Judge Mack's staff, delivered nine "Not A Number" trafficking-prevention trainings to groups reaching 60 youth, and facilitated the monthly Texas TBRI® Practitioner Collaborative, extending Montgomery County's prevention model across Texas and beyond.

Based on data collected 9/1/24-8/31/25 | Training & TBRI® Community Education | Child Advocates of Montgomery County

Hope in Action: Three Cases. Three Programs. One Constant.

A Journey Home

"The kids were frightened and disturbed. They were hesitant to trust anyone else." — Russell, Advocate

Eight-year-old Amaya and her older brother, Carter, entered foster care and were placed in a group home far from home, frightened, withdrawn, and slow to trust anyone. Then their Advocates discovered that Amaya's father, a devoted parent in Michigan, had never stopped caring. He traveled more than 30 hours by bus to attend the first hearing.

Read Amaya and Carter's full story. Scan the code or visit ChildAdvocatesTexas.org/hope-in-action-stories-highlighting-our-advocacy/

A Letter That Changed Everything

"At first, I was hesitant to even have a conversation with you. Now, I'm begging for you to come visit me." — Madison

When Madison, a justice-involved teen, first met her Advocate, Kristen, she was guarded and skeptical — convinced Kristen was there to send her away. But Kristen kept showing up: through detention stays, home visits, and court hearings. Months later, asked to write a thank-you letter to someone who had made a difference, Madison chose Kristen.

Read Madison's full story. Scan the code or visit ChildAdvocatesTexas.org/hope-in-action-stories-highlighting-our-advocacy/

Walking the Path Together

"I'm doing this because I care about you and your success. I want to see you walk across that stage at graduation." — Curtis, Advocate

For months, Jordan — a kind, athletic teenager — struggled to get to school. After weeks of encouragement, his Advocate, Curtis, got the call that Jordan hadn't shown up again. So Curtis drove to the house and told the sixteen-year-old they were walking the two miles to school together.

Volunteer Advocates for Children

Our volunteers are the heartbeat of this organization, and for the children they serve, they are the face of hope.

They are not paid. They are not assigned by an employer. They are not required to stay. And yet they show up for a child they had never met, in a system that can be overwhelming, for as long as that child needs them. The title “volunteer” hardly captures the depth of their commitment. In truth, our Advocates are the very heartbeat of this organization.

Each one completes 39+ hours of pre-service training, passes a rigorous background check, takes a sworn oath before a judge, and commits to a child until that child’s case is closed, a journey through hearings, home visits, school meetings, and hard conversations. They show up on the good days and the difficult ones. They celebrate the small victories and sit with the setbacks. And when everyone else in a child’s life may change, the Advocate is the one who stays.

171 Active Volunteer Advocates

Volunteers by Years of Service

Volunteers by Age

Who Volunteers to Become a Child Advocate?

Child Advocate volunteers are everyday people — teachers, businesspeople, retirees, stay-at-home parents, and grandparents — united by a single commitment: to make a difference for the children and families of Montgomery County. They come from every corner of our community, and they give what no program or system can manufacture: consistent, caring presence.

*The heart behind the work. Hope is the key, and our Advocates are how a child finds it. Scan to watch **Why We Advocate: Voices of Hope from Child Advocates of Montgomery County** and hear why they show up.*

More Ways to Make a Difference.

Being an Advocate is one of the most powerful things a person can do for a child, but it isn't the only way to be part of this mission. Whether you have an afternoon, a skill to share, or a desire to help behind the scenes, there is a place for you at Child Advocates of Montgomery County.

Board and Staff

The work of Child Advocates of Montgomery County is made possible by the leadership of our Board of Directors and the dedication of our staff. Together, they provide the governance, expertise, and day-to-day commitment that allow our volunteer Advocates to focus on what matters most: the children.

Our Mission

To empower vulnerable children through volunteer advocacy and strengthen their family and community with education, so they can flourish in a safe, nurturing environment.
